Summary

Dedicated and results-oriented Cybersecurity Engineer with a Bachelor's in Electronics and Communications Engineering and strong, hands-on experience in Microsoft 365 Security, network defense, and Blue Team operations. Proven ability to architect and implement Zero-Trust frameworks, deploy and monitor Microsoft Defender XDR and Sentinel, and automate incident response through SOAR workflows. Combines a solid foundation in networking (CCNA-level) and systems administration with practical experience in threat hunting, vulnerability assessment, and security monitoring. Currently excelling as a Microsoft 365 Security Engineer, focused on enhancing identity protection, endpoint security, and data compliance. Passionate about threat detection and leveraging technical expertise to build resilient security postures.

Core Skills

- **Cybersecurity:** Network Defense, Threat Detection, Vulnerability Assessment, Incident Response, Security Monitoring, CompTIA Security+ & CySA+ Fundamentals
- **Microsoft 365 Security:** Microsoft Entra ID, Microsoft Intune, Microsoft Defender XDR, Microsoft Purview, Microsoft Sentinel
- **Networking:** TCP/IP, Routing & Switching, Network Devices & Technologies, Protocols & Services, Firewall Configuration, IPS and IDS, Access Control Lists (ACLs)
- **Systems Administration:** Linux Administration, Windows Server Management, Active Directory, User & Policy Management
- **Security Tools & Platforms:** Nessus, OpenVAS (Greenbone), Nmap, Wireshark, Splunk, VMware, Docker, Cisco Packet Tracer, Windows Event Viewer, VirusTotal, AbuseIPDB, MXToolbox, 010 Editor
- **Professional Skills:** Technical Documentation, Business Communication, Project Management Basics, Career Development

Education

Bachelor of Engineering in Electronics and Communications Engineering

Zagazig University, July 2025

Very Good Grade

- Graduation Project: "Integrated Smart Vehicle Management System (ISVMS)"

Work Experiences

Microsoft 365 Security Engineer

Global Brands Group (GBG), New Cairo (Fifth Settlement), June 2026 – Present

Networks & Cybersecurity Instructor

Galaxy for Development (GFD), Sharkia, January 2026 – June 2026

- Delivered training in networking fundamentals (CCNA-level) and cybersecurity concepts.
- Taught topics including TCP/IP, routing & switching, network security, and system administration.
- Guided students through hands-on labs using tools like Cisco Packet Tracer and Wireshark.

- Introduced students to security concepts such as threat detection, incident response, and basic defense techniques.
- Supported students in developing practical and problem-solving skills in IT and cybersecurity.

Microsoft 365 Security Engineer

GBG Academy, New Cairo (Fifth Settlement), January 2026 – May 2026

- Implemented security controls across Microsoft Entra ID, improving identity protection and reducing unauthorized access risks.
- Managed Microsoft Intune for device compliance, MDM/MAM, and endpoint security.
- Deployed and monitored Microsoft Defender XDR solutions for threat detection and response.
- Implemented Microsoft Purview (DLP & sensitivity labels) for data protection and compliance.

Blue Team Cybersecurity Boot Camp

National Telecommunication Institute (NTI), Smart Village, October 2025 – January 2026

- Strengthened professional competencies through business communication, career development, project management, and essential workplace skills modules.
- Gained practical experience in network security, Linux administration, and incident response as part of Blue Team training.
- Conducted hands-on labs in CompTIA Security+, CySA+, cryptography, and cloud security fundamentals.
- Exposed to offensive security concepts by learning common tools and performing basic tests.
- Worked with Splunk SIEM for log analysis, threat detection and incident monitoring.
- Applied YARA rules for malware detection and analysis, implemented Windows and Linux system hardening practices, and developed knowledge of PKI fundamentals.

Projects

VM Deletion Watchdog

Global Brands Group (GBG), July 2026

- Architected a complete Sentinel SOAR workflow to detect unauthorized Azure VM deletions by ingesting Azure Activity logs via diagnostic settings and building a KQL-based analytics rule.
- Automated incident response by creating an automation rule that triggers a Logic App playbook to enrich alerts with entity data (actor, IP, resource) and post real-time notifications to Microsoft Teams.
- Managed end-to-end implementation including Azure Policy assignments, managed identity permissions, entity mapping, and end-to-end validation testing of the detection and response pipeline.

MDE Attack Disruption Simulation

Global Brands Group (GBG), July 2026

- Simulated a multi-stage attack (reconnaissance, credential brute force, payload execution) from Kali Linux against an MDE-onboarded Azure VM to validate Defender's automated response capabilities.
- Triggered attack disruption by orchestrating correlated high-confidence alerts, successfully achieving automatic device isolation and containment via MDE's built-in playbooks.
- Validated prerequisite configurations including device group remediation levels and Sense agent versions, and documented rollback procedures for automated containment actions.

Ingesting Sysmon Data into Microsoft Sentinel

Global Brands Group (GBG), July 2026

- Deployed & configured Sysmon with custom XML filtering on Windows endpoints to capture advanced telemetry (process creation, network connections, registry changes) beyond native Windows auditing.
- Ingested security logs into Microsoft Sentinel by onboarding machines via Azure Arc and creating Data Collection Rules (DCRs) to forward Sysmon and Windows Security events to the workspace.
- Validated data flow using KQL queries in Advanced Hunting, enabling enriched threat hunting and detection for LOLBins abuse, credential dumping, and process injection.

Enterprise Security Lab End-to-End Microsoft 365 Defense Implementation

GBG Academy, May 2026

- Architected & deployed a Zero-Trust security framework across Microsoft 365, hardening identity with Conditional Access/PIM, securing 1,800+ endpoints via Intune and Defender, and implementing Purview DLP to protect regulated IP and PHI.
- Engineered threat protection across the full Defender XDR suite (MDE, MDO, MDI, MCAS), centralizing security telemetry into Microsoft Sentinel with custom analytics and automated SOAR playbooks for rapid containment.

Centralized Logging and Security Monitoring Using Splunk

Self-Learning, January 2026

- Designed and deployed a centralized logging solution using Splunk Enterprise on Rocky Linux.
- Forwarded logs from Kali Linux using rsyslog and Splunk Universal Forwarder.
- Configured indexes, firewall rules, and enabled real-time log monitoring in a secure lab environment.

Enterprise Network Design & Security Implementation

National Telecommunication Institute (NTI), December 2025

- Designed a dual-stack IPv4/IPv6 enterprise network with VLAN segmentation and routing (OSPF/OSPFv3).
- Implemented network security controls including ACLs, Zone-Based Firewall (ZPF), and Cisco ASA (DMZ).
- Configured AAA (TACACS+, RADIUS) and established a Site-to-Site IPsec VPN.

Splunk Threat Hunting Use Case Development

National Telecommunication Institute (NTI), December 2025

- Developed a threat hunting use case based on MITRE ATT&CK techniques using Splunk.
- Built SPL queries and detection logic using Windows and Sysmon logs.
- Documented detection workflow, false positives, and response strategies.

Lumma Stealer PCAP Investigation

National Telecommunication Institute (NTI), November 2025

- Analyzed malicious PCAP traffic to identify Indicators of Compromise (IOCs).
- Detected suspicious domains, IPs, and payload patterns to support incident response.

Metasploitable Attack Simulation

National Telecommunication Institute (NTI), November 2025

- Performed vulnerability scanning using Nmap and exploitation via Metasploit.

- Simulated attacker behavior and established basic C2 communication in a lab environment.

Integrated Smart Vehicle Management System (ISVMS)

Graduation Project, June 2025

- Developed an IoT-based smart vehicle system with automation, monitoring, and mobile control.
- Built Android app (custom UI/UX) and web dashboard for real-time data visualization.
- Implemented features including collision avoidance, auto-parking, and environmental monitoring using ESP32 & ATmega32.

Certificates & Courses

Microsoft 365 Security, Global Brands Group (GBG), May 2026

Blue Team Cybersecurity Boot Camp, National Telecommunication Institute (NTI), January 2026

Network Security, National Telecommunication Institute (NTI), January 2026

Certified Cybersecurity Educator Professional (CCEP), December 2025

Cybersecurity academy (Graduate Level), National Telecommunication Institute (NTI), September 2025

Windows Server Administration (MCSA), YouTube (Online), July 2025

Cisco Certified Network Associate (CCNA), National Telecommunication Institute (NTI), September 2024

Extra-Curricular Volunteer Activities

- Created and shared study notes and summaries for university courses to help classmates better understand complex topics.
- Wrote and organized educational materials across different subjects to make learning easier for peers.

Languages

- Arabic: Native
- English: Very Good

Personal Information

- Date of birth: August 2002.
- Nationality: Egyptian.
- Military status: Final Exemption.
